

# iClass Interactive Language Learning System

iClass is a Language Learning System applied in network environment with variety of teaching and management tools. These functions are developed for teacher' s convenience to design teaching activities, apply multimedia materials and create simulation scenarios, in order to instruct the students to do the reading, listening and speaking ability training.

# Repeat Speaking Exercise

Through comparing student reading sound's sonic and original sound's sonic, student can master their own high / low of pronunciation and rise / down of intonation.

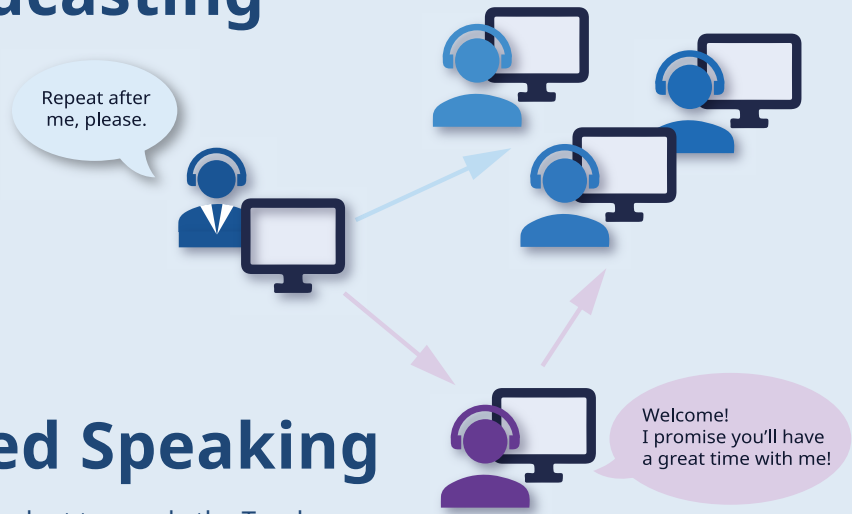

Can set up the playing paragraph of the audio or video for repeated speaking training.

## Sonic Comparison

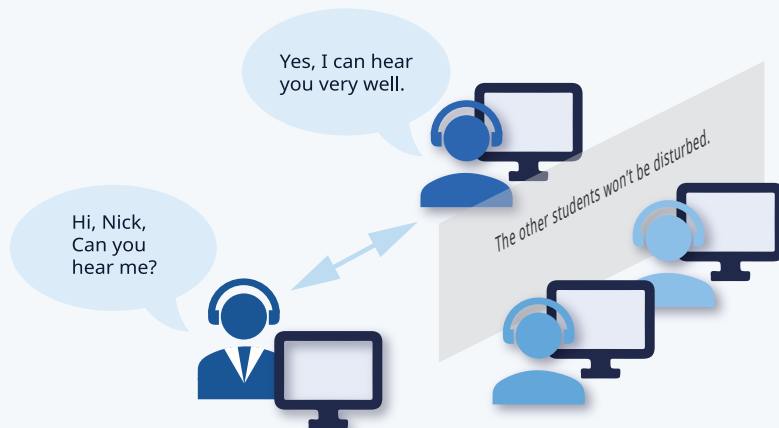

### Audio Broadcasting

Variety of audio teaching material can be transferred to single / part of / all of the Student through "Audio Broadcasting" function.

### Appointed Speaking

Teacher can assign a student to speak, the Teacher and the other students can hear the student's speaking from their earphone.

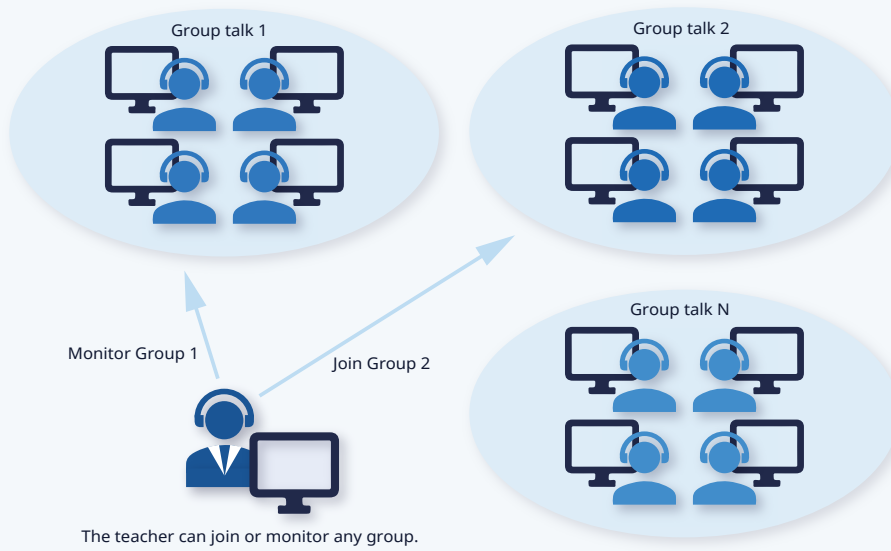

### Voice Chat

Teacher can select the student to do the dialog practice, Q&A exercise, etc. interactive voice chat.

## Role Play

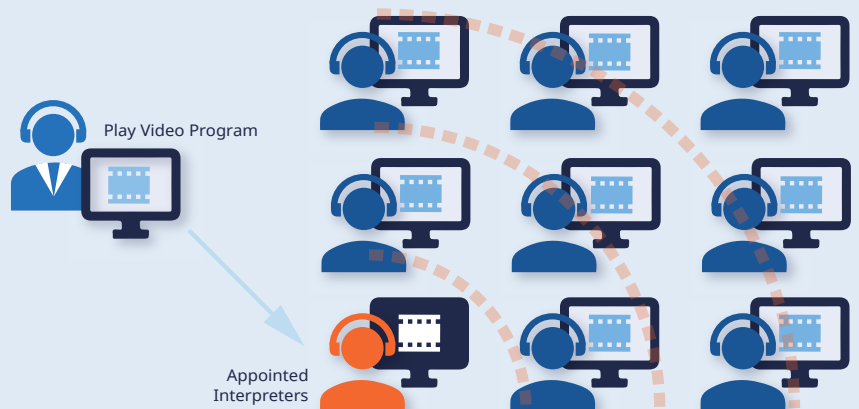

Play a section of video file and assign the roles in the drama to be played or imitated by appointed students, let students practice conversation with the simulation scenarios.

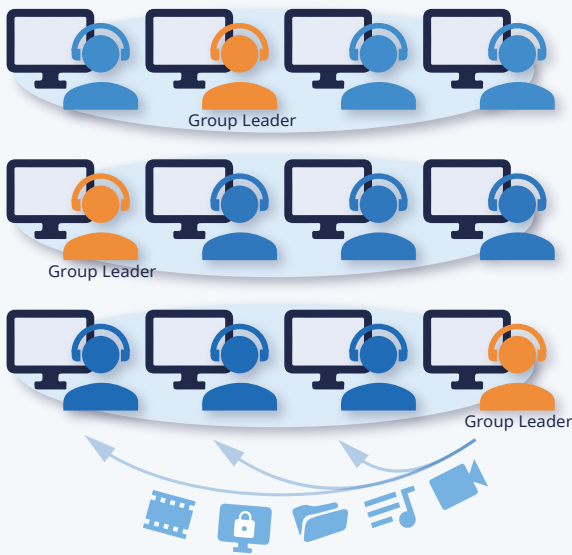

## Group Talk

Teacher can divide students into 2~6 people per group to do the dialog exercises.

Play a section of video and assign a student to do the synchronous interpreters.

## Simultaneous Interpretation

## Group Teaching

Assign a group leader for each group. The group leader can perform the teaching activity and give instruction to group members.

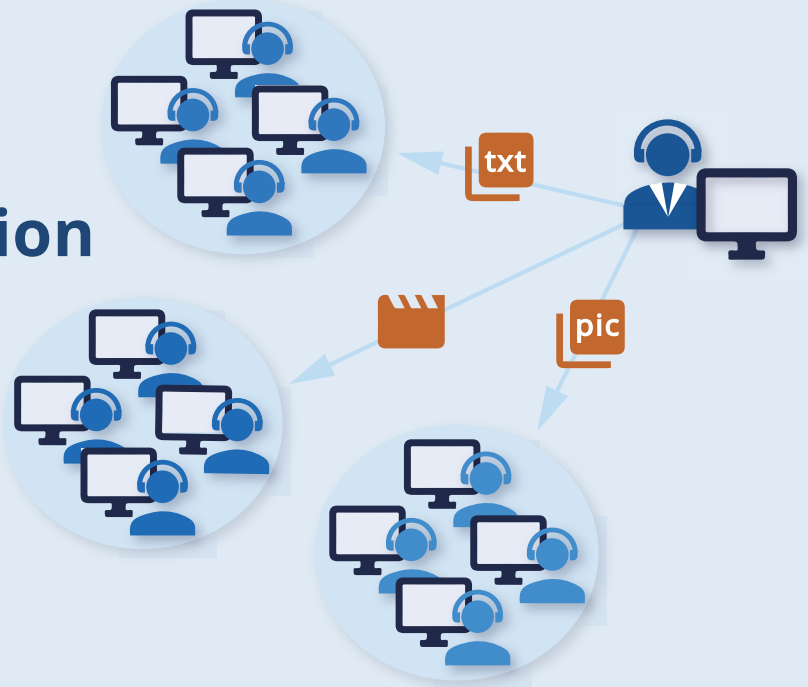

## Group Management

Quickly divide all the students into groups, and assign the group leaders for each group.

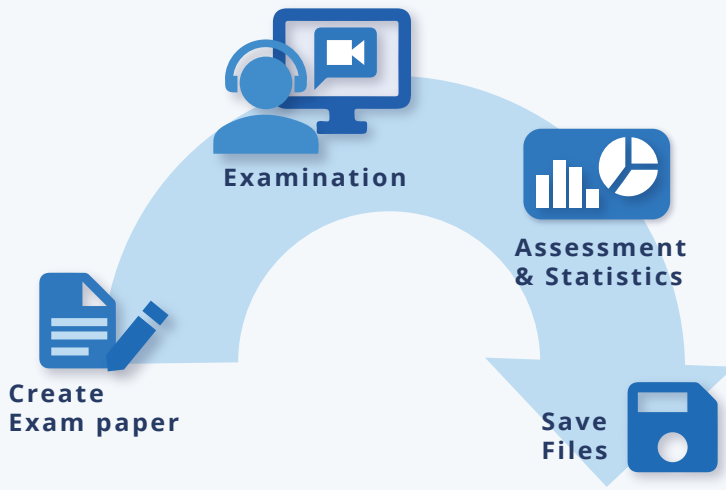

## Topic Discussion

Teacher can set up the teaching topics or scenarios for different groups to discuss.

## Material Practice

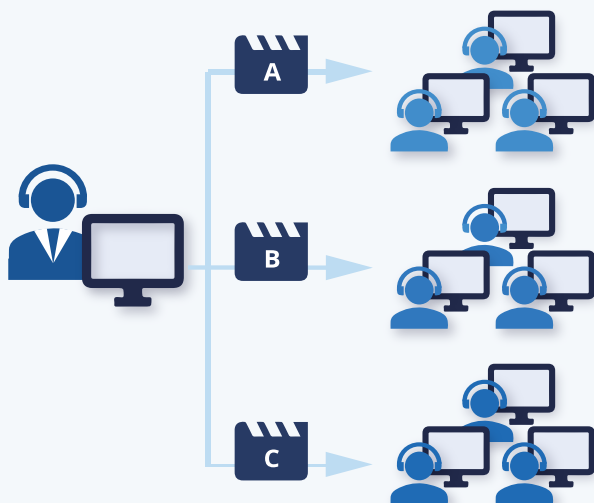

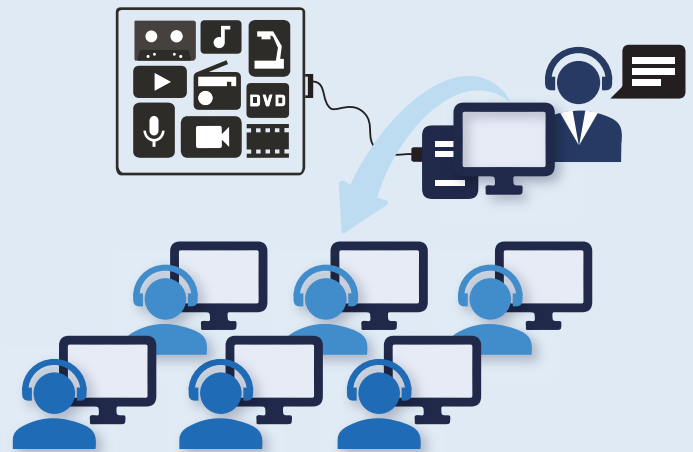

Within the practice materials provided from teacher, including audio or video, students can select the learning content by themselves.

Contains “comprehensive test”, “Oral Exam”, “Class Quiz”, etc. several exam methods. And with automatic paper marking, statistical analysis, and score management after the online exam is finished, can evaluate the learning outcome immediately.

## Screen / Video / External Broadcasting

The system can broadcast the various formats of multimedia video and can also import the materials from other digital and analog video equipment to play and transfer variety of teaching media resources. It allows the student to learn the foreign language easily in the different scenarios.

## Multitrack Broadcasting

Teacher can set up multiple tracks (channels) video teaching programs, and transfer different content to different group of students.

# Teaching Assistance Tools

Except for the various “teaching functions” for teaching, exercise, exam, etc., the system also provides complete teaching assistant tools and class management functions, which convenient teacher to perform teaching and management activities.
